The Astronaut's Return

In 2050, a rocket was launched, and 5 astronauts headed to another galaxy. They went farther, than any humans had gone before. They traveled for 1 year, and studied the atmosphere and life, on a planet discovered by the James Webb telescope. They arrived, on a spectacularly beautiful blue planet, with some similarities to Earth. Astronauts Mohammed and Noah, explored the landscape, looking at the lakes, oceans, and life forms. Lily and Sofia, collected data, and did experiments. Jack took thousands of photos. Finally, they embarked on the long journey back to Earth. Their "space capsule" landed safely in the ocean. They brought back some samples of life forms, for scientific research. So, everyone was waiting, to see the alien flora and fauna, which has been kept top secret until now. Are these life forms friendly? And will they help us?
