- deadly

Sentences

- 1) Vaccines are one of the most important medical breakthroughs in history.
- 2) I think I have strong natural immunity against illness.
- 3) Pharmaceutical companies make too much money.
- 4) We need to have many labs doing research into deadly viruses so we can understand them better.
- 5) I often get side effects when I get vaccine injections.
- 6) I would happily participate in a clinical trial for a life-saving vaccine.
7. Vaccines are the best way to protect against viruses, by helping the body to build up immunity.
8. Viruses are the number one threat to the survival of the world.
9. I would love to do research into vaccines and viruses.

Possible answers

- 1) I agree that vaccines are one of the most important medical breakthroughs in history. They have saved countless lives and have been crucial in the fight against many diseases.
- 2) I disagree. I think that natural immunity is important, but it is not always enough to protect against illness. Vaccines can help to boost immunity and protect against diseases.
- 3) I agree that pharmaceutical companies make too much money. They are often more concerned with profits than with helping people.
- 4) I agree that we need to have many labs doing research into deadly viruses so we can understand them better. This will help us to develop better vaccines and treatments.
- 5) I agree that I often get side effects when I get vaccine injections. However, these side effects are usually mild and temporary. They are worth the risk if it means that I can protect myself against a deadly disease.
- 6) I would happily participate in a clinical trial for a life-saving vaccine. I think it is important to help researchers develop new and improved vaccines.
- 7) I agree that vaccines are the best way to protect against viruses, by helping the body to build up immunity.
- 8) I agree that viruses are the number one threat to the survival of the world. We need to be constantly vigilant in our fight against them.
- 9) I would love to do research into vaccines and viruses. I think it is important work that could save many lives.
